Online platforms for critical operations

For businesses with active orders and payments.

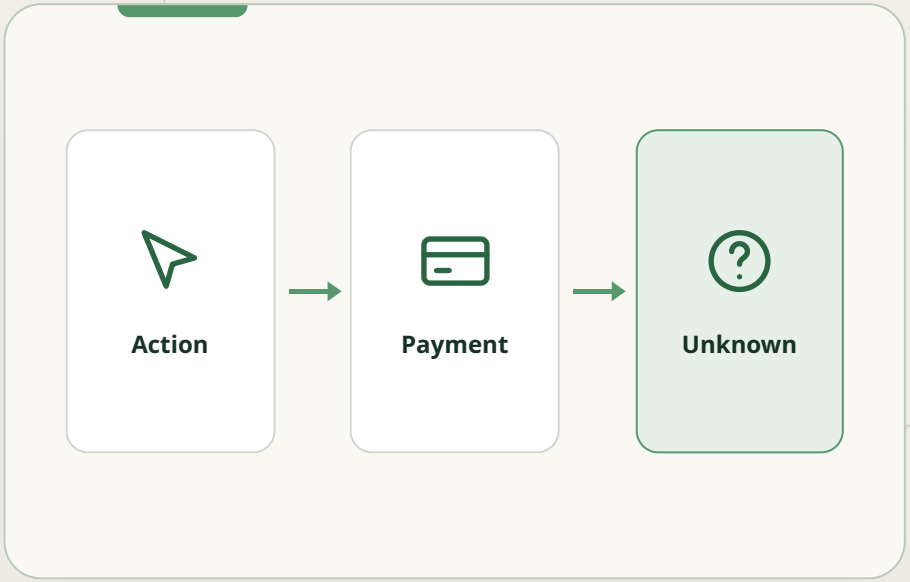

For businesses where errors cost money.

You have customers. You need the state of every order and payment.

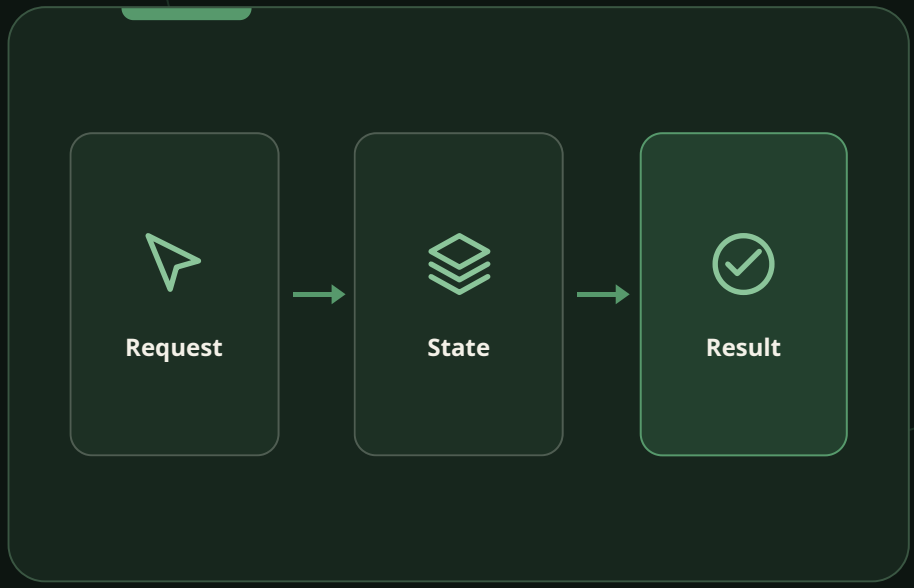

Lost status stops work.

Staff cannot confirm a payment. Customers retry while the team searches for the result.

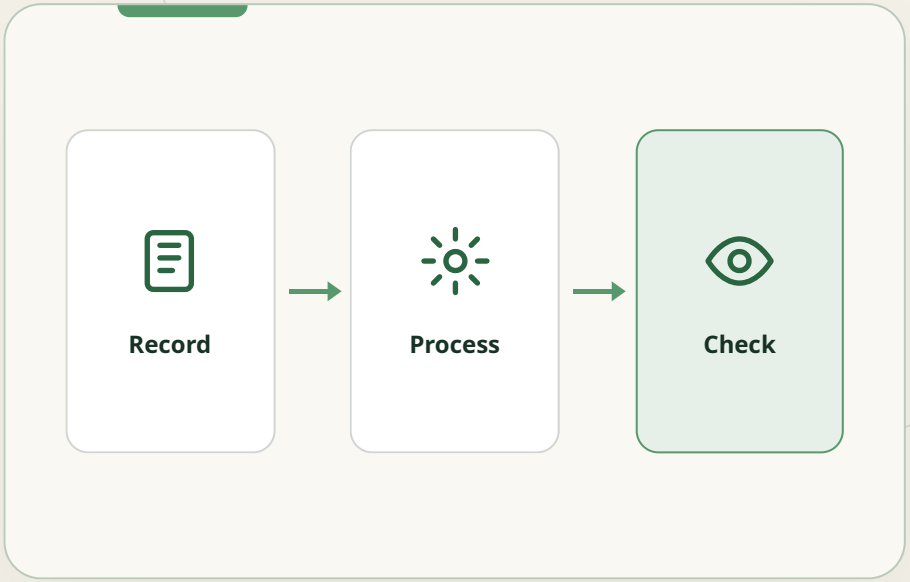

Start with one agreed workflow.

We design the path from customer action to result.
We also define failure and recovery.

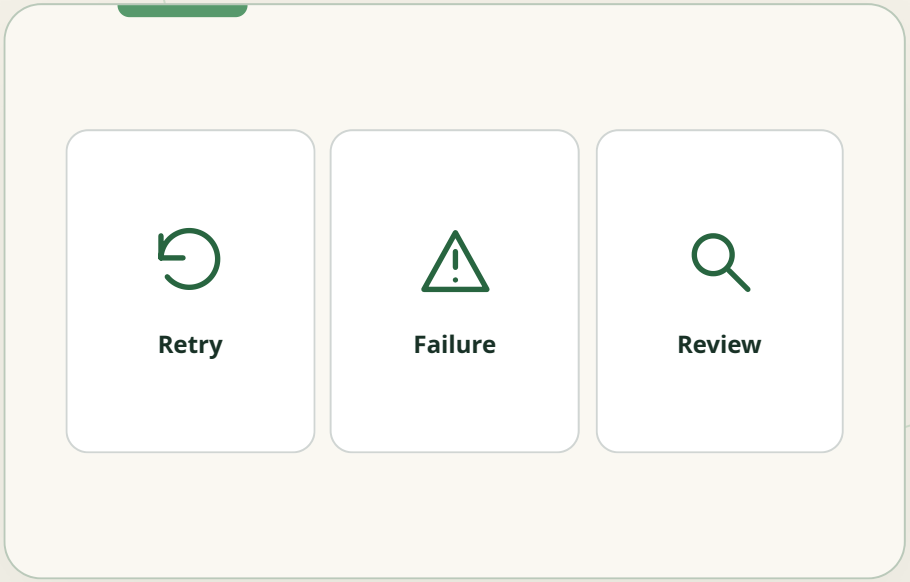

Make every step observable.

The state is stored. Your team can see processing and investigate a failure.

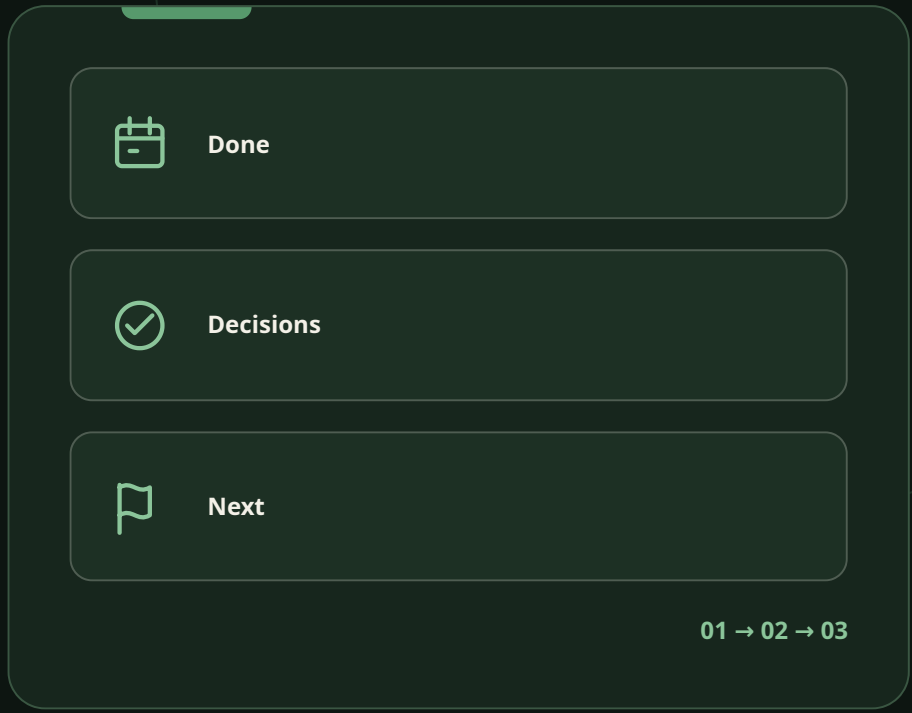

Plan recovery before launch.

Retries and failures become test cases. The specific workflow defines the guarantee.

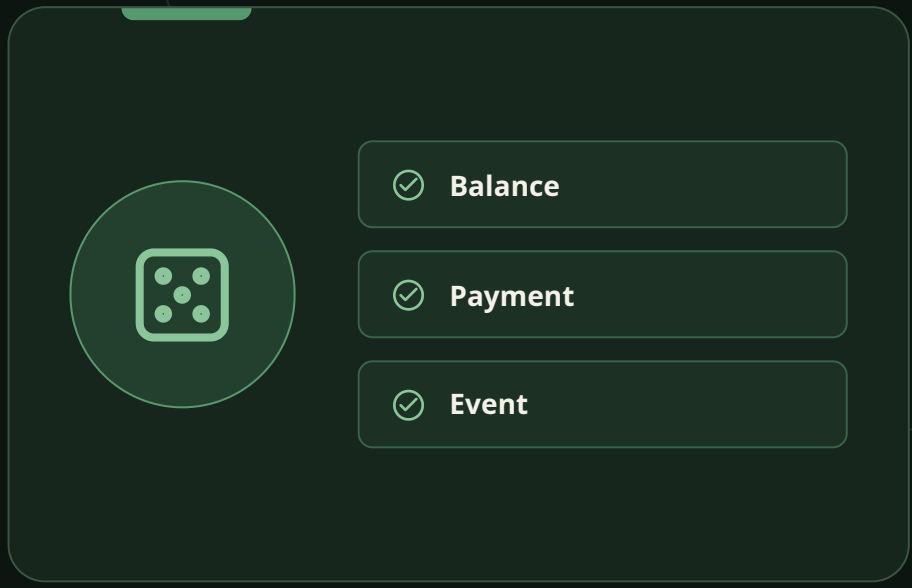

A report and result every sprint.

We show completed work, open questions, and the next step. Modular architecture helps us assess changes before revising the plan.

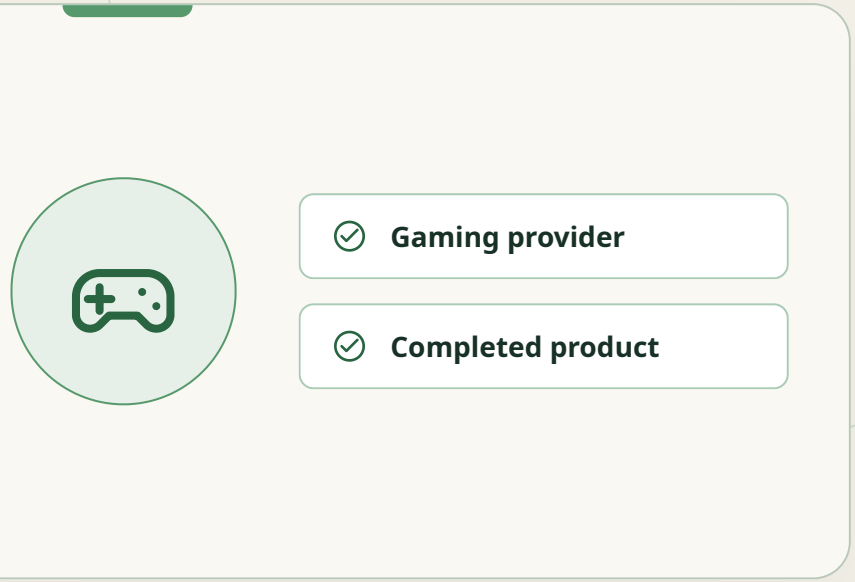

Casino: experience with money flows.

We worked on a gaming product with balances, payments, and events.

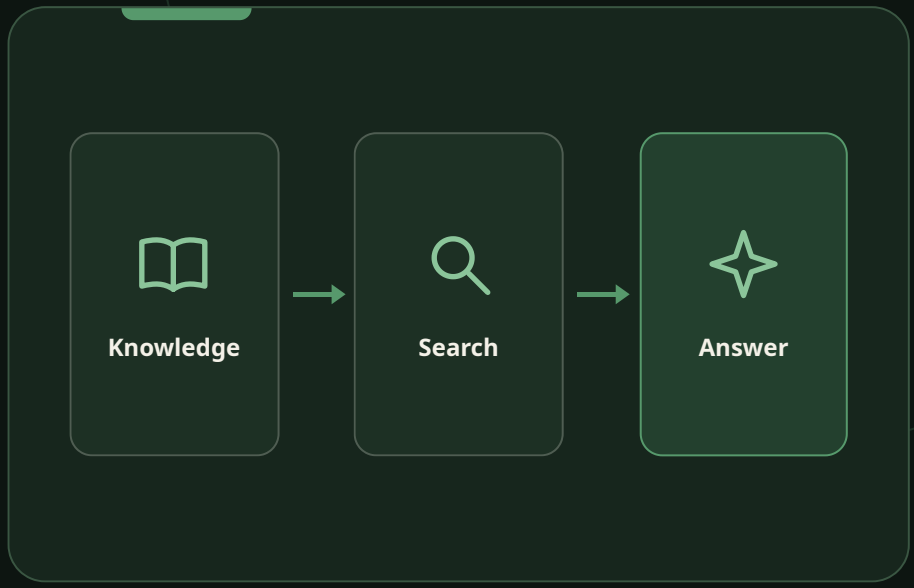

Gaming provider: a completed product.

A separate platform for the gaming industry is part of our development experience.

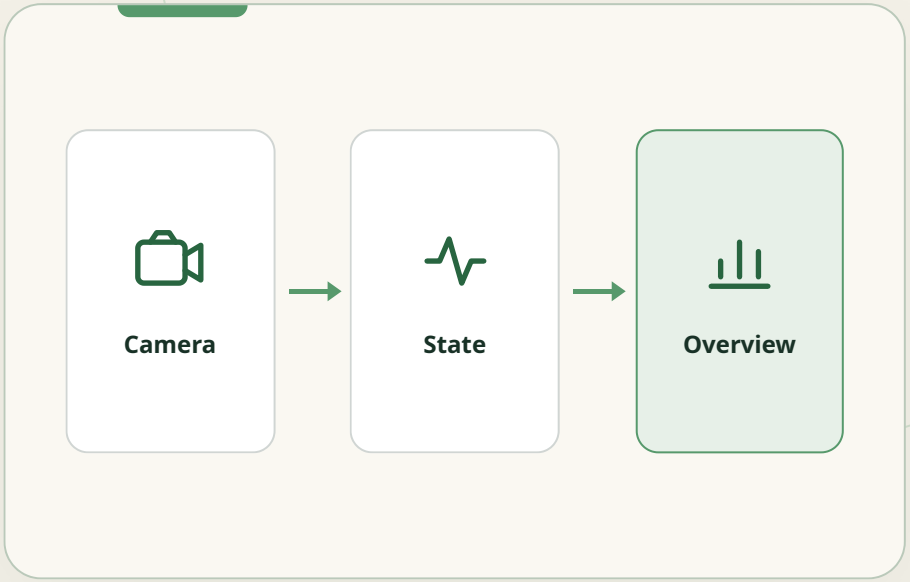

AI agents use a checked knowledge base.

We built search by words and meaning. Artificial intelligence agents find rules and record their sources.

AI analysis tracks animal activity.

Our work includes camera video, saved frames, and time spent in activity states.

Subscriptions start at $2,500 monthly.

Includes workflow, hosting, and support. External fees and new integrations are separate.

$2,500 /month

- Workflow
- Hosting
- Support

Tell us about one operation.

Send its flow and load. We will propose scope and price.
